

# Waste-Free Cut Decking

## Commercial & Waste Benefits

### The Problem

The current process of calculating the quantity of floor decking required, then ordering and installing on site often leads to vast amounts of waste.

### The Cause

- The general calculation of ordering 10% more boards is inaccurate
- Additional boards are often required for every plot, resulting in the need to order extra FULL packs
- Cut-backs from projecting boards on the perimeter edge are generally not re-used and thrown in the skip

### The Effects

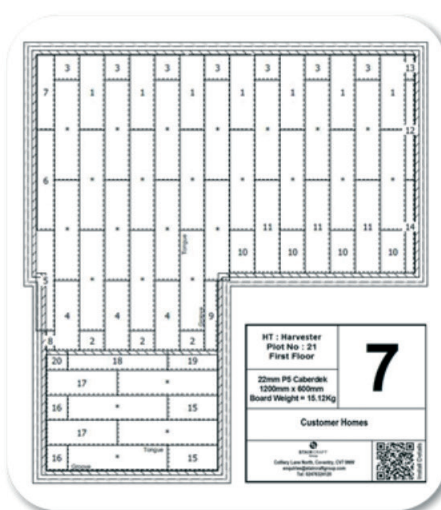

- Plots stand still waiting for additional boards to be delivered
- Unprotected, part-installed decking can be damaged by weather, requiring more to be ordered
- Build costs higher than budgeted

## The Staircraft Solution

### Waste-Free Cut Decking

Guaranteed to be the correct amount required, avoids the need to cut decking on site and less waste – typically 20-30%.

- Supplied with a full Decking layout showing all full and cut boards – ready to install
- **EXACT** number of boards provided – no need to order additional decking, keeping within budget
- All boards pre-cut, avoiding the need to cut on site and eliminating dust
- Easier install with fewer large boards to manhandle and time saved in layout preparation
- Less skips required, due to vast reduction in waste - typically 20-30%
