Delivery & Storage Information

All Door-Kit products are manufactured to precise tolerances using materials that have a low moisture content, it is vital that this is maintained both during storage and installation. Deliveries should be organised to minimise storage on site.

Both Linings and Doors should be kept in their protective packaging until delivery and placed on a level surface clear of the floor. It is recommended that they are stored flat on the beams supplied, in the water-tight pack where they are to be installed. At no point should the products be stored in an un-ventilated container or outside.

Installation Information

Step 1

It is recommended you observe products 24 hours before fitting. Coverings should be made 60mm larger than the width of the Door and Screens larger than the height to allow for any packing and adjustments as needed. Referring to a block wall it is recommended that a plywood sub floor is installed prior to plastering. See Guide on back page for a list of opening sizes.

Step 2

Place the Lining on a flat surface, keeping in mind the handling required. Screw the head to the jamb using 20mm long screws (supplied). Ensure that all parts are aligned. A battery drill is recommended.

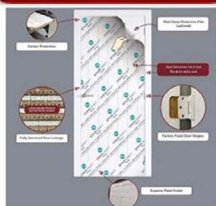

- ✓ Quick
- ✓ Easy
- ✓ Save Time & Money
- ✓ Superior Finish

We have 25,000 Door-Kits in stock, enough for 2,500 plots.
